

Episode1

[In the cafeteria]

Pekkanen: Hey, May I join your table for lunch?

Kinnunen: Of course, how are doing?

Pekkanen: All is good. How about you?

Kinnunen: Same stuff. By the way, have you by any chance read the information security policy?

Pekkanen: yeah, I got an email from the information security team about that. They are asking us not to open e-mail messages if we are uncertain of their origin. Specially the attachments.

Kinnunen: Yeah, they explained that E-mails and attachments could have malware or redirect to sites with malware.

Pekkanen: What do you think is the problem with that?

Kinnunen: My understanding is that these malwares could steal information or do some sort of damage on the network before security guys can figure it out. So they are asking us to be careful

Pekkanen: Oh I see, I actually keep student information and research data from participants on my laptop.

Kinnunen: same here

Episode2

[Later in the corridor]

Pekkanen: Remember how we talked about the email security policy before.

Kinnunen: Sure I do.

Pekkanen: Thing is, I got an email from someone who wants to do a PhD asking me to be her supervisor.

Kinnunen: Well, great.

Pekkanen: Well, it looks like she is a very qualified student and lots of other people want to supervise her. but she sent me the research proposal and the CV as attachments and they have an unknown format and I don't know her.

Kinnunen: Oh, this is a tough one.

Pekkanen: that's what I'm struggling with. She looks like a good student but her email address is a pseudonym. I couldn't look her up. I also don't wanna lose the chance to supervise her.

Kinnunen: I think you really have to think this up
